

Cross Platform Entwicklung Mit Tabris Js Shortcuts 235 By Elena Bochkor Veikko Krypczyk

Von Apps wird heute im Allgemeinen erwartet, dass sie mindestens auf den beiden großen mobilen Betriebssystemen Android und iOS laufen, im Idealfall gibt es auch noch eine Desktopversion für Windows, Linux und macOS. Doch für Entwickler bedeutet das nicht nur einen gewaltigen Arbeitsaufwand, da praktisch für jedes OS eine eigene Anwendung geschrieben werden muss, sondern eben auch die für Einzelpersonen und kleinere Teams kaum zu erfüllende Anforderung, sich in einer Vielzahl von Programmiersprachen bestens auszukennen. Kein Wunder also, dass Cross-Platform-Ansätze immer beliebter werden. Bei Tabris.js handelt es sich um ein Framework, mit dem Sie in JavaScript bzw. TypeScript Apps für die wichtigsten Plattformen entwickeln können und dabei Ihren Code nur einmal schreiben müssen. Wie das funktioniert, zeigen Ihnen Elena Bochkor und Veikko Krypczyk in diesem shortcut. Sie stellen die wichtigsten Elemente und Funktionen von Tabris.js vor und erläutern anhand von Beispielen die wichtigsten Stationen im Bau einer App für mehrere Plattformen und Geräte, von der Planung und dem Entwurf des UI über den Build bis hin zum Debugging.
